Interpreting Remainders

Round It	Drop It	Share It
Example: Seventeen people will attend a party. Each table at the party seats 5 people. How many table will be needed?	Example: There are 15 marbles and 6 girls. How many marbles will each girl get?	Example: Jack and Jill picked 5 apples. How many apples will each person eat if they both eat the same amount?
$17 \div 5 = 3$ r2	$15 \div 6 = 2$ r3	$5 \div 2 = 2$ r2
$17 \div 5 = 3\frac{2}{5}$	$15 \div 6 = 2\frac{1}{2}$	$5 \div 2 = 2\frac{1}{2}$
Answer: 4 tables	Answer: 2 marbles each	Answer: 2½ apples each
