$$1 = 1. \quad 2 = 2. \quad 3 = 3.$$

There is a decimal point at the end of every whole number.

$$1 = \frac{1}{1} \quad 2 = \frac{2}{1} \quad 3 = \frac{3}{1}$$

There is a denominator of 1 with all whole numbers.

$$4 = 4^1 \quad 5 = 5^1 \quad 6 = 6^1$$

There is an exponent of one on every whole number.
